21LEM202T — Unit 1, Session 2, SLO 1

Part B — In-Class Activity

Activity 1 — Value = Participation in the Larger Order

For each unit, write the larger order it participates in and its value (role).

Unit	Larger order	Value / role
Wheat	**Ecosystem / food chain**	**Nourishment for humans and animals**
A piece of chalk	**Classroom / education system**	**Writing tool for teaching**
Myself (as a member of my family)	**Family**	**Contributing to harmony and well-being of family members**

Activity 2 — Values or Skills?

Mark each item: is it about WHAT to do (value) or HOW to do (skill)?

Item	What to do (Value) / How to do (Skill)
Deciding to behave with respect in the family	**What to do (Value)**
Learning to operate a machine	**How to do (Skill)**
Deciding to utilise resources rightly	**What to do (Value)**
Coding / drafting / welding technique	**How to do (Skill)**

Activity 2: Are the problems around you more due to lack of skills or lack of values? Which has priority?

The problems around us are more due to lack of values than lack of skills. Values have priority because they guide what we should do, while skills only help us do it efficiently; without right values, skills can be misused.

Activity 3 — Did You Decide Your Values?

List two values/habits you have adopted. For each, mark whether you decided it on your own right, or it was programmed by others (society, peers, etc.).

Value / habit adopted	Decided on my own right? / Programmed by others?
Honesty	**Decided on my own right**
Punctuality	**Programmed by others**

Part C — Long-Answer Questions

Q1. “Value of a unit is its participation in the larger order.” Explain this statement with examples, and extend it to human values.

The statement means that the worth or value of any entity (a unit) is determined by how well it contributes to the harmony and functioning of the larger system it belongs to. For example, a pen's value lies in its participation in the act of writing, which serves communication; a tree's value is in its role in the ecosystem, providing oxygen and shade. Extending this to human values, a person's value is realized through their participation in family, society, and nature — by fulfilling responsibilities, showing compassion, and contributing to the well-being of others. Thus, human values are not intrinsic possessions but are expressed through active, harmonious participation in larger orders.

Q2. State and explain the four guidelines for value education.

The four guidelines for value education are: 1) **Universal** — Value education should be applicable to all human beings, regardless of culture, time, or place, because it is based on universal human aspirations. 2) **Rational** — It must be based on reasoning and logical analysis, not on dogma or blind faith, so that it can be understood and accepted by all. 3) **Natural and verifiable** — The content should be in harmony with human nature and can be verified through one's own experience and practice. 4) **All-encompassing** — It should cover all dimensions of human life — individual, family, society, and nature — and lead to holistic development.

Q3. Distinguish between values and skills. Explain their priority and complementarity, and comment on the present state of education.

Values refer to the fundamental principles that guide human behavior and relationships, such as trust, respect, and justice, while skills are the technical abilities and competencies to perform specific tasks. Values have priority over skills because they determine the direction and purpose for which skills are used — without values, skills can be misused. However, they are complementary: values provide the ethical foundation, and skills enable effective action. In the present state of education, there is an overemphasis on skill development and career-oriented learning, while value education is often neglected or treated as an add-on. This imbalance leads to individuals who are technically competent but lack ethical sensitivity, resulting in social and environmental problems. A holistic education must integrate both values and skills.
