21LEM202T — Unit 2, Session 9, SLO 1

Part A — Key Ideas (Recap)

●. ● We talk of a 'Global Village' — the world connected physically by technology. But what about the mindset? Do we have a

global world-view, or is our way of thinking individualistic?

Part B — In-Class Activity

Activity 1 — Localise or Globalise?

Based on the deck, mark each item as something to Localise or to Globalise.

Item	Localise / Globalise
Needs of the Body	**Localise**
Mindset of living in a relationship of mutual fulfilment globally	**Globalise**
Needs of the Self	**Globalise**

Activity 2 — Achievements and side-effects

From the film, list the achievements and the side-effects of the prevalent world-view.

• Prevailing view about the goal of society (as shown in the video): **maximisation of wealth and power through competition and exploitation**

• Achievements of the prevalent world-view: **technological progress, economic growth, increased material comfort, global connectivity**

• Side-effects of the prevalent world-view: **environmental degradation, resource depletion, social inequality, exploitation of people and nature, loss of community and mental peace**

Part C — Long-Answer Questions

Q1. Answer in your own words, verifying each point on the basis of your natural acceptance.

Q1. According to the film, what is the prevailing view about the goal of society, and what are some achievements and side-effects of this world-view? [5]

According to the film, the prevailing view about the goal of society is to maximise wealth and power through competition and exploitation of people and nature. Achievements include rapid technological advancement, economic growth, increased material comfort, and global connectivity. Side-effects include environmental degradation, resource depletion, social inequality, exploitation of weaker sections, and loss of inner peace and community bonds. On the basis of my natural acceptance, I verify that while material progress is desirable, it should not come at the cost of human relationships and ecological balance.

Q2. Why does physical connection through technology ("global village") lead to exploitation of people and nature when the world-view is not global? [5]

When the world-view is not truly global — i.e., it is individualistic or nationalistic, focused on one's own benefit — then physical connection through technology enables the powerful to reach across the globe to exploit resources and labour without any sense of responsibility or mutual fulfilment. The 'global village' becomes a network for extracting wealth from weaker regions, leading to exploitation of both people and nature, because there is no shared vision of harmony or well-being for all.

Q3. What are the two essential requirements of a global world-view? [5]

The two essential requirements of a global world-view are: (1) a sense of universal human values that recognises the inherent dignity and well-being of every person, and (2) a commitment to mutual fulfilment and harmony with nature, rather than competition and exploitation. These ensure that actions taken anywhere in the world consider the impact on all people and the environment.

Q4. What does the deck propose we localise and what we globalise, and why? [5]

The deck proposes that we localise production and consumption of essential goods (like food, clothing, and basic services) to strengthen local economies, reduce transportation costs, and build community self-reliance. We should globalise knowledge, technology, and cultural exchange that promote mutual understanding and cooperation. The reason is that localising essentials reduces exploitation and environmental damage, while globalising beneficial knowledge fosters harmony and shared progress.

Q5. Is there a solution to present-day problems? Give your view based on the film and the localise/globalise idea. [5]

Yes, there is a solution. Based on the film and the localise/globalise idea, the solution lies in shifting from an individualistic, competitive world-view to a global, cooperative one that prioritises mutual fulfilment and harmony with nature. By localising the production of necessities and globalising knowledge and values that support universal well-being, we can address both exploitation and environmental degradation. This requires a conscious change in our thinking and lifestyle, starting with each individual.

Self-Reflection (Take-Home)

• Is your own way of thinking global (for mutual fulfilment) or individualistic? Give one example. (Slide 4)

• In your own life, what would you choose to localise and what to globalise? (Slide 6)

• My own way of thinking is **global (for mutual fulfilment)**. For example, when I buy products, I try to choose those that are ethically sourced and support fair trade, rather than just the cheapest option, because I consider the well-being of the producers.

• In my own life, I would choose to **localise** my food consumption by buying from local farmers and growing some vegetables at home, and I would **globalise** my learning by sharing knowledge and skills online with people from different cultures, while respecting their local contexts.
